# HOW TO ORDER?

To place your order for the MDHA Apple Tree program please contact your local chapter. You can find your local chapter by visiting our website at [www.mndeerhunters.com/find-your-chapter](http://www.mndeerhunters.com/find-your-chapter).

For more information please visit our habitat page at [www.mndeerhunters.com/what-we-do/habitat](http://www.mndeerhunters.com/what-we-do/habitat) . Check back often as we add new information as we get it.

## Apple Tree Program History

In 2019, MDHA introduced the Conservation Apple Tree Program as a new perk for its members. Apple trees, ideal for northern Minnesota's climate, are available at a discount to cultivate wildlife habitats. These trees, mostly University of Minnesota selections or from Canada, are around 5 to 8 feet tall when bare-rooted. Interested MDHA members can reach out to their local chapter for details on joining this habitat promotion initiative. The program saw an excellent start statewide with 1,500 apple trees already bought by enthusiastic members!

## MDHA APPLE TREE PROGRAM

MDHA's apple tree program has been enhancing habitats for members for years by providing a variety of ready-to-plant trees. Discover the benefits of planting MDHA apple trees on your property today.

- ✓ Attract Deer
- ✓ Healthy Food Supply
- ✓ Increase Your Property Value
- ✓ Help The Environment
- ✓ Feed and Protect Animals and Pollinators
- ✓ Enjoy Beautiful Sights and Smells

**UNIVERSITY OF MINNESOTA APPROVED TREES**

5-8 Feet Tall  
Bare Root

Once the trees are ready for pickup your chapter will let you know how and where you can pickup your order.

# TREE CARE

Visit us online at [www.mndeerhunte.com/habitat](http://www.mndeerhunte.com/habitat) for Apple Tree care instructions.

**DID YOU KNOW ?**

Planting apple trees does not differ much from planting other types of trees, but there are some special things to consider when planting these fruit trees. If planting apple trees in a lawn, the grass should be removed from the planting area in a four-foot diameter circle, to prevent the grass from competing with the young tree for nutrients and water.
